TECHNICAL SKILLS

Languages: C, C++, JavaScript, PHP

Frontend: HTML, CSS, React, Tailwind CSS

Backend: Node.js, Express.js

Databases: MySQL, MongoDB

EDUCATION

Pokhara University <i>Bachelor of Engineering in Information Technology</i> 6th Semester	2023 – Present Nepal
Trinity International College <i>+2 Science</i> GPA: 3.84	2021 – 2023 Kathmandu, Nepal
Xavier International School <i>Secondary Education Examination (SEE)</i> GPA: 4.0	2021 Kathmandu, Nepal

PROJECTS

Football Club Management System	PHP, MySQL, JavaScript
– Built a full-stack club/season management system in PHP (procedural, mysqli) and MySQL for tracking squads, fixtures, results, and player statistics across multiple seasons. – Implemented squad and fixture management with photo/flag image uploads, goal/assist event entry per fixture, and client-side filtering by position and nationality. – Designed aggregated statistics views computing player leaderboards (goals, assists) and club league tables (W/D/L, GF/GA/GD, points) via SQL joins across fixtures and goal events. – Built a video highlight library with per-season upload/storage/deletion, and session-based admin gating for content management on top of public browsing.	
Predictator	React, Node.js/Express, MongoDB, Google OAuth
– Built and deployed a full-stack tournament prediction platform (React, Express/MongoDB) with Google OAuth login and JWT-based sessions. – Designed a scoring engine awarding points for exact scores, correct winners, and correct draws, with explicit handling of penalty-shootout edge cases in knockout matches. – Built a standings engine that recalculates group tables (points, goal difference, qualification) live from completed fixtures, with server-side prediction deadlines locked before kickoff. – Implemented private leagues with shareable join codes, an admin panel for fixture/knockout-stage management, and production hardening (Helmet, CORS, rate limiting, health checks).	

InterviewIQ

React, Node.js/Express, MongoDB, FastAPI, spaCy, SBERT

- Built a full-stack adaptive mock-interview platform with a **React** SPA, **Express/MongoDB** REST API, and a standalone **FastAPI** NLP microservice.
- Designed a rule-based **adaptive difficulty engine** tracking per-topic mastery in real time, plus a **Rasch-style (1PL IRT) calibration system** that auto-tunes thresholds from response data with statistical gating and safe fallback defaults.
- Built an NLP service using **SBERT** semantic similarity and **spaCy** keyword/concept coverage to evaluate free-text reasoning quality, kept isolated from the MCQ score.
- Implemented full **JWT auth** (register/login/reset), rate-limited APIs, analytics/session endpoints, and a role-based admin panel for question and engine management.
